PROFESSIONAL SUMMARY

Data analyst and project coordinator with a dual foundation in IT Engineering and International Business. Analyses data to find where the numbers are telling a different story than the assumption, translates those findings into decisions a business can act on, and coordinates the delivery structures that make sure those decisions actually get implemented. Technically strong across SQL, Python, Excel and Power BI, with hands-on experience managing data pipelines, stakeholder reporting, project tracking and cross functional coordination in fast paced commercial environments. Currently developing knowledge of AI and automation tools to improve the speed and quality of analytical and operational workflows. The value is not in doing one or the other — it is in doing both at the same time.

CORE SKILLS AND COMPETENCIES

Data and Analysis: SQL (MySQL), Python (Pandas, NLTK, VADER), Excel (Advanced, Pivot Tables, Data Modelling), Power BI (DAX, Data Modelling), Exploratory Data Analysis, Data Cleaning and Wrangling, Business Intelligence (BI), KPI Definition, Data Storytelling, Git

Project and Business: PRINCE2 Foundation (in progress), Requirements Gathering and Analysis, Process Improvement, Gap Analysis, Stakeholder Reporting, Agile, Scrum, Waterfall, Gantt Charts, Resource Allocation, Budget Tracking, Project Lifecycle Management

Platforms: Domo, Salesloft, Salesforce, Monday.com, Jira, Notion, Google Analytics, Microsoft Office, AI Tools (ChatGPT, Claude, Gemini)

WORK EXPERIENCE

Durhamlane is a specialist B2B sales consultancy. The roles below represent progressive embedded client placements held under the same employer.

Account Development Manager | Domo via Durhamlane

Oct 2025 to Present

- Used Domo to analyse Durhamlane live performance data across revenue, outreach activity and account engagement, identifying reporting gaps that were causing poor targeting decisions and presenting structured recommendations to the Head of Operations.
- Analysed patterns across 1,200+ account records in Excel to identify which ICP profiles were generating results and which were not, using those findings to restructure targeting strategy and improve pipeline quality.
- Planned and facilitated 30+ qualification meetings with senior stakeholders across IT, Procurement and Finance, managing structured handover documentation to coordinate progression through the pipeline efficiently.

Project and Operations Coordinator | Siemens Healthineers via Durhamlane

Sept 2024 to Sept 2025

- Managed end to end data pipeline for 2,000+ prospect records: cleaning and standardising raw data in Excel, identifying and resolving inconsistencies, then loading structured data into Salesloft in collaboration with the platform admin and Head of Operations at Siemens.
- Interrogated the cleaned dataset to identify which ICP segments were generating qualified leads and which were not, using that analysis to shift targeting from volume to quality and directly improving conversion rates and pipeline accuracy.
- Surpassed a 300 opportunity target by delivering 320 qualified leads across 100+ daily outreach touchpoints, with data quality improvements contributing measurably to stakeholder confidence in the dataset and outreach efficiency.

Sales Development Representative | Durhamlane

Aug 2024 to Oct 2025

- Redesigned end to end outreach workflows with the team lead, restructuring sequencing and automating follow up processes to achieve a 20% uplift in connection rates, demonstrating process improvement and operational efficiency across commercial operations.
- Maintained real time pipeline visibility by tracking KPIs across Excel, Salesloft and Monday.com, delivering accurate weekly status reports that sharpened stakeholder decision making and team accountability.

Assistant Project Manager | Bincom Global

Apr 2024 to Aug 2024

- Delivered a competitive landscape analysis benchmarking rival products against internal offerings and presented findings directly to the Head of Product, informing strategic positioning decisions at a senior level.
- Built and maintained Excel trackers for 100+ event attendees using VLOOKUP and date functions to monitor attendance patterns, flag data gaps early and keep delivery on track across a team of 8.
- Researched event platform subscription costs, identified free but effective alternatives and produced a budget comparison that helped the team reduce unnecessary spend while maintaining delivery quality for a large scale event.

SELECTED PROJECTS

Each project follows the same approach: identify the business problem first, use data to diagnose it, and present findings as actionable decisions.

GTA Online: Player Intelligence Report SQL, Python, Excel, Power BI | 2026 [\[GitHub\]](#)

- Identified that aggregate review scores were masking specific player pain points driving churn. Built an end to end analytical workflow in Python processing 52,099 reviews, applied VADER sentiment scoring and NLP to extract what players were actually saying, then used statistical validation and correlation analysis to translate unstructured feedback into quantified revenue exposure for a non-technical executive audience.
- Delivered a Power BI reporting system with 15 DAX measures enabling stakeholders to interrogate data by segment and risk level themselves, removing the single point of dependency on a static report and enabling faster, more targeted business decisions.

Uber Ride Operations Analysis SQL, Excel, Power BI | 2025 [\[GitHub\]](#)

- Defined the business problem: a 38% cancellation rate was costing recoverable revenue but the root cause was unknown. Designed a MySQL schema, wrote 10 analytical queries across 20,000+ records and used segmentation analysis to isolate which cancellation types were most frequent and most costly.
- Translated findings into specific, costed business interventions with a prioritised action roadmap, then built a Power BI dashboard to track cancellation trends in real time, turning a one-off investigation into an ongoing operational intelligence capability.

Project Portfolio Management System Excel, MS Project, Power BI | 2025 [\[GitHub\]](#)

- Diagnosed fragmented reporting across 99 projects as the root cause of poor resource visibility. Designed a connected tracking system in Excel, MS Project and Power BI covering task monitoring, Gantt charts, critical path analysis, budget variance and completion rates, giving leadership a single reliable view of delivery status across the entire portfolio for the first time.

EDUCATION

MSc International Business and Management | University of Manchester, United Kingdom

Relevant Modules: Requirements Gathering and Analysis, Business Strategy, International Markets

BEng Information Technology | Savitribai Phule Pune University, India

Relevant Modules: Database Management Systems (DBMS), Data Structures, Information Retrieval
